

Technical Data Sheet

SX Premium Rainproof Exterior Caulk Rain resistant immediately after application

Product Description

A one component, high quality acrylic sealant which is rain resistant immediately after application. It is almost odour free and is not corrosive towards metals. After application the product forms a soft flexible rubber seal. Once fully cured, can be painted with water based and synthetic paints.

Benefits

- Rain resistant immediately after application
- Exterior use
- High elongation at break and high movement accommodation
- Paintable with water based and synthetic paints
- Perfect adhesion without the use of a primer, even on damp substrates
- Almost odourless
- Easy to clean
- Easy to apply
- Non corrosive towards metals
- Excellent tooling properties.

Applications

For sealing and filling of gaps and cracks where movement can occur, such as perimeter sealing between wooden and metal window and door frames, and connection joints between concrete, brickwork, windowsills, stairs, ceilings, walls, metal sheets, thresholds, panels, aerated concrete, plasterboard and lime-stone. Has good adhesion without primer on painted wood, anodised aluminium and PVCu.

Directions Of Use

Cut the cartridge seal and screw on the nozzle which should be cut to your required size. Using a skeleton gun, apply the sealant into the gap or joint ensuring a good solid fill.

Additional information

100 % modulus	DIN 53504 S2	0,10 N/mm ²
Application temperature		+5°C to +40°C
Base		Acrylic dispersion
Density	ISO 1183-1	1,57 g/ml
Frost resistance during transportation		Up to -15°C
Shorea hardness	DIN 53505 / ISO 868	10
Skin formation	DBTM 16	10 minutes @ +23°C/50% RH
Temperature resistance		-20°C to +75°C
Tensile strength	DIN 53504	0,10 N/mm ²

These are typical values

Limitations

- Not suitable for PE, PP, PC, PMMA, PTFE, soft plastics, neoprene and bituminous substrates
- Although the product is rain resistant, it will not withstand heavy driving rain and hail during curing
- Not suitable for continuous exposure to water

Surface Preparations and Finishing

Surfaces must be clean, dry and sound. The product can be diluted and used as a primer for highly porous surfaces prior to application. We recommend a paint compatability test before application. Adhesion tests prior to application are recommended. In deep joints reduce the joint depth to 50% of the joint width using expanding foam or joint backer rod. Always tool using a spatula or stick wetted with water within 5 minutes of application.

Paintability

Once fully cured, can be painted with water based and synthetic paints. Painting over with highly filled water based paints can cause cracks in the paint film.
